Introduction

Fusion Systems Hong Kong has officially become ISO 27001 certified an international standard to manage information security! With ISO/IEC 27001 added to our Japan Privacy Mark compliance program, our IT Managed Services team will continue to demonstrate commitment to information protection following the global best practices to support our clients, vendors, and other stakeholders.

Vulnerability Assessments and Penetration Testing

With the increasing use of digital services outside of, or beyond, the corporate network it is becoming particularly important to visualize the security of your staffs' networking activities. Fusion Systems IT Managed Services can help you to conduct vulnerability assessment and penetration testing which can provide critical information to help protect your server, network infrastructure and other digital activities. Our security team conducts a range of tests and provides you with a detailed report of security weaknesses within the company's IT infrastructure. Our extensive experience installing and maintaining multiple platforms allows us to provide additional insights to enhance the test results. Feel free to ask us about our security procedures and how we integrate with client security and compliance programs.

Using Creativity to Redesign your workflows

Business interactions have been changing fast. The explosion in applications and new ways to interact with your customers and employees now demands creativity in designing your digital environment to compliment and strengthen your business processes and relationships with your clients. Fusion System has experts from various backgrounds to improve performance in using or integrating cloud-based SaaS applications related to back office, order management, ticketing systems and on-line marketing. Fusion Systems have the right people to provide creative solutions to all

areas of your business functions that involve your employees, their interaction with clients, trusted distributors, and other stakeholders.

Global project experience to enhance your business

Our perspective on digital solutions is broad. With extensive experience in APAC countries, we have provided superior project management and on-going support that consistently completes projects on time and efficiently for the largest global retail brands. Our experts provide global project management bringing together global requirements with local realities. Our teams consist of experienced project managers well versed in ensuring smooth project progression involving multiple client offices and vendors. Coordinating and sustaining multi-party communications is a critical activity and we use proven communication techniques that result in good decisions made by dispersed team members.

The EC Council share 5 Reasons Why Businesses Need Penetration Testing

1. Uncover vulnerabilities before cybercriminals exploit them.
2. Reduce network downtime.
3. Initiate a highly efficient security measure.
4. Enable regulatory compliance.
5. Protect the company's reputation and customer trust.
